

Bryant Soza

Perris, CA | +1 951 373 0778 | bryant23soza@gmail.com

Professional summary

Self-taught software developer currently pursuing a degree in Computer Science at Mt. San Jacinto College with a 4.0 GPA. Proficient in a practical stack including HTML, CSS, JavaScript, React, and Firebase, with academic and self-directed coursework extending into C++ and SQL. Having built a technical foundation through independent projects before entering formal higher education, I combine rigorous classroom computer science theory with proactive, practical problem-solving.

In addition to my technical studies, I work as a Quality Control Specialist at American Wire Group, inspecting products, auditing enterprise inventory data in Microsoft Dynamics 365, verifying specifications, and enforcing strict compliance standards. This operational experience reinforces my analytical precision, root-cause troubleshooting, and commitment to zero-defect quality—strengths that directly translate into software engineering through structured debugging, test-driven validation, and data integrity.

Eager to bridge academic computer science principles, practical software development, and quality assurance discipline to build resilient, efficient, and user-centered systems.

Work experience

Quality Control Specialist

American Wire Group | Perris, CA

April 2024 to Present

Conduct detailed quality control inspections on cable reels across receiving, cutting, and shipping, with a primary focus on identifying physical damage to cable, reels, and packaging.

Inspect incoming reels from receiving, verifying reel condition and container information before products are approved for inventory.

Verify batch accuracy and print legend accuracy, confirming cable markings match reel labels, order details, and system records.

Ensure reels are properly palletized, secured, and packaged to prevent damage during storage and shipment.

Use Microsoft Dynamics 365 to report damaged reels, update reel information, and maintain accurate quality control records.

Utilize Microsoft Excel, Word, and Outlook to track incoming containers and monitor reels scheduled for receiving.

Support shipping and warehouse operations by confirming product quality and order accuracy before reels are released for shipment.

Order Picker Forklift/Order Sorter

Amazon Warehouse | Perris, CA

February 2022 to March 2024

- Operated a stand-up cherry picker forklift with a picking cage to retrieve items from multi-level racking, then transported and dropped completed cages at designated staging areas
- Used RF scanners and warehouse management systems to scan items and confirm accurate picks in real time
- Sorted packages from conveyor belts and accurately stacked boxes onto designated pallets in sequential order
- Covered completed pallets and used a stationary tablet to print and apply labels, ensuring proper identification and tracking

Assembly Line Production Worker

Peloton | Perris, CA

March 2019 to December 2021

- Assembled up to 250 Peloton bikes per 8-hour shift, consistently meeting high-volume production targets

- Skilled in using hand tools, power tools, and specialized equipment to assemble complex components accurately
- Assembled Peloton bikes with precision and efficiency, meeting high-quality standards in a fast-paced production environment
